LOOK UP!

LOOK OUT FOR POWERLINES

- Keep your equipment and load at least 3 metres (10 feet) away from a powerline rated between 750 and 150,000 volts (inclusive). For higher voltage, see section 188 of the Construction Regulation for the minimum permitted distance.
- Use a signaller if any part of your equipment or load could encroach on the minimum permitted distance.
- If you make electrical contact, stay in the vehicle and keep others away. Someone must call the local utility.
