Infrastructure Health and Safety Association
Guidance on worker procedures (handling paperwork) during COVID-19

Overview

During the COVID-19 (coronavirus) outbreak, we all need to do our part to keep workers, customers and the public safe and healthy so we can stop the spread and prepare to reopen the province, when we are ready.

Below is a set of resources, tips and best practices to help employers and employees prevent the spread of COVID-19 and work together to reopen the province.

Employers and workers in Ontario have certain duties and rights under the Occupational Health and Safety Act (OHSA) and its regulations. Employers should also review and follow any applicable directives and guidance coming from the Chief Medical Officer of Health and Ministry of Health.

- workers’ rights
- employers’ responsibilities

Best practices

**Recognize hazards and assess risks:** The first step to controlling risks in a workplace is to identify the risks. This applies to all workplace hazards, not just COVID-19. Identifying and controlling workplace hazards is required of all employers in Ontario under the [Occupational Health and Safety Act](https://www.ontario.ca/laws/sect/4.35) and its regulations.

Identifying the risks of COVID-19 exposure include understanding how it is spread and what can increase the risk of a worker becoming infected. COVID-19 can be spread at the workplace in two main ways:

1. person to person – by people who are in close contact
2. by surfaces or objects – when people touch their face with contaminated hands after touching a contaminated surface or object

For more information, visit: ihsa.ca/COVID-19
The level of risk in an activity will be related to the number of opportunities for transmission of the virus. This includes how close people come to each other, how many different interactions there are between people, how often people touch surfaces or objects, and how long people stay in a space.

It is possible for COVID-19 to be spread by people who do not have any symptoms. This makes effective control measures very important. We must act as if everyone is infected when setting up controls.

The risk of severe health outcomes is not the same for all workers. The risk increases with age and is higher for people with certain medical conditions.

In most commercial environments, handling paperwork (e.g., signing for deliveries, issuing work orders) is a normal part of business. This may require being in close contact with other people to exchange documents. As a commercial vehicle driver, shipper, or receiver you should be aware of some of the precautions to take when handling shipment-related paperwork (e.g., shipping documents, bills of lading).

**Controls:** Infection prevention and control measures prevent the spread of the virus by breaking the chain of transmission. For example, public health guidance recommends staying at least 2 metres away from others which avoids close contact; and washing hands removes the virus and prevents people from touching their faces with contaminated hands.

For COVID-19 in the workplace, always start by considering the most effective controls first. It is best to begin by trying to eliminate the hazard – to remove it from the workplace altogether. Where that is not possible, use multiple engineering and administrative controls first to prevent the spread. Protective equipment, including personal protective equipment (PPE) and community protective equipment, should be relied on only where engineering and administrative controls do not sufficiently reduce the risk to workers.

If protective equipment is required for workers, determine the appropriate form of protective equipment and train workers on the care, use and limitations of the equipment.

Here are some effective administrative and engineering controls:

1. **Maintain physical distancing.** Physical distancing means maintaining a distance of at least 2 metres (6 feet) or more between persons. By practicing physical distancing, you are less likely to be exposed to a respiratory virus.
2. **Use alternative forms of communication.**
   - Use technology for communication (e.g., text messaging and mobile phones) rather than having in-person conversations as much as possible.
   - Where possible, use technology to send and receive paperwork (e.g., scanning equipment and electronic proof of delivery).
   - Do not share pens. Request that others use their own pen or stylus when signing. If required to share, use disinfectant wipes to clean pens and styluses.

3. **Clean and disinfect regularly.**
   - Regularly disinfect any areas that you are frequently in contact with or are used by other people (e.g., tables, desks, tablets, pens, door handles).
   - Have sanitizer or soap present and visible for all staff to use.
   - Monitor your supplies and refill them regularly.
   - Wash your hands frequently before and after transferring paperwork.
   - Use appropriate cleaning gloves when cleaning potentially contaminated surfaces.
   - Dispose of cleaning gloves and soiled materials in regular garbage.
   - Remove garbage from the facility regularly, and wash hands after disposal.
   - Avoid touching your eyes, nose, and mouth.

**Evaluate:** Changes to work procedures or practices related to COVID-19 may affect the way you have routinely managed other risks in the workplace. Thus, it is recommended that you consider the various preventative measures on an ongoing basis, and review and adjust accordingly if they are not working as intended or have created new risks or challenges.

Review procedures with your supervisor or employer. If the procedures are not working, communicate with your supervisor/employer to modify. Also, notify your supervisor/employer if more resources are needed, such as pens, clipboards, sanitizing resources or other supplies.

Follow-up and evaluation are essential to ensure the effectiveness of controls and solutions implemented. You should also determine the following:

- Has the hazard been eliminated or the risk minimized appropriately?
- Is there a better way to control the risk?
- Is the control being used consistently and as planned? Monitor behaviour and practices, and your improvement over time.
- Continuously engage your workers, and communicate recommendations and adjustments with supervisors.

**Stay home if you are feeling ill.** If you detect symptoms, you should immediately distance yourself from others and go home. If possible, avoid using public transit. Ensure you notify your supervisor so that they are aware of the situation and can also notify others who may have been exposed.

Ontario government and agency-issued resources about COVID-19

Develop your COVID-19 workplace safety plan: Learn how you can create a plan to help protect your workers and others from novel coronavirus 2019 (COVID-19).

Workplace Safety Plan

The Ontario Ministry of Health is providing consistent updates on the provincial government’s response to the outbreak, including:

- status of cases in Ontario
- current affected areas
- symptoms and treatments
- how to protect yourself and self-isolate
- updated Ontario news on the virus

Public Health Ontario is providing up-to-date resources on COVID-19, including:

- links to evolving public health guidelines, position statements and situational updates
- synopsis of key articles updating on the latest findings related to the virus
- recommendations for use of personal protective equipment
- information on infection prevention and control
- testing information
- other public resources

Other COVID-19 resources

Health Canada outlines the actions being taken by the Government of Canada to limit spread of the virus, as well as what is happening in provinces and communities across the country. It also maintains a live update of the number of cases by province.

The World Health Organization is updating the latest guidance and information related to the global outbreak and spread beyond Canadian borders.

For more information, visit: ihsa.ca/COVID-19
It also provides the most up-to-date information on:

- current research and development around the virus
- a COVID-19 situation “dashboard”
- emergency preparedness measures
- live media updates on the spread of the virus

This resource does not replace the *Occupational Health and Safety Act (OHSA)* and its regulations, and should not be used as or considered legal advice. Health and safety inspectors apply the law based on the facts in the workplace.
