

# IHSA safety training for supervisors

**Supervisors** play an important role in the workplace. They need to know their responsibilities when it comes to health and safety and how to engage workers, managers, and owners to maintain safety in the workplace.

They need to know their responsibilities under health and safety law, have effective communication skills in order to convey vital safety requirements, and have the knowledge to supervise highly skilled people working in high-hazard environments.

The Infrastructure Health and Safety Association provides these supervisory courses that can help workers make the transition to this important safety role.

## **Basics of Supervising and Basics of Supervising—Federally Regulated**

These two courses provide supervisors with the information they need in order to understand their roles and responsibilities under provincial or federal health and safety law and what health and safety tasks they need to ensure they are in compliance.

## **Communication Skills for Supervising Health and Safety NEW!**

This program provides information that goes beyond the *Basics of Supervising* training program and provides supervisors with the specific communication tools they need to implement critical health and safety solutions. **Includes an IHSA Supervisor Log Book (RF008)**

## **Incident Investigation and Reporting Awareness**

Participants in this course learn to conduct an incident investigation and prepare an incident report based on their investigation.

## **Introduction to Hazard and Risk Management**

This program provides the tools to assist those involved in developing or enhancing their organization's hazard and risk management system. Through structured exercises and case studies, participants will be introduced to concepts, methods, and tools used to create, implement, evaluate, communicate, and maintain a successful hazard and risk management system.

These are just a few courses in a series of programs IHSA is creating to meet the needs of Ontario's infrastructure supervisors working in high-hazard environments. Watch for additional courses in 2017.
